

Proactively Detect CSAM at Scale

Protect your platform with advanced CSAM detection solutions built by experts in child safety technology.

Built by Thorn to ensure every platform with an upload button can identify, review, and report child sexual abuse material (CSAM), Safer Enterprise is a comprehensive solution that detects known and new CSAM.

Why choose Safer Enterprise

Industry-leading technology

Harness industry-leading CSAM detection developed by Thorn, a trusted leader in the fight against online child sexual abuse and exploitation.

Trusted datasets

Identify known CSAM using proprietary hashing and matching against 57.3 million known CSAM hash values.

Advanced AI detects new CSAM

Detect new and previously unreported image and video CSAM with state-of-the-art machine learning classification models.

Wellness-centered review

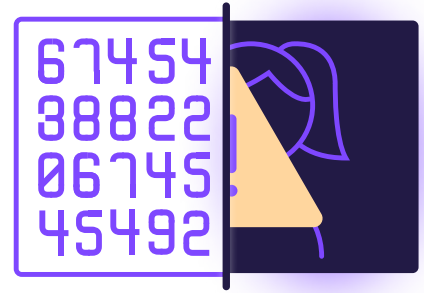

Review flagged content while reducing unnecessary exposure to CSAM.

Easy reporting

Collect data and connect to your NCMEC or RCMP account for streamlined workflows.

Self-hosted deployment

Integrate directly into your tech stack for control, security, and scalability.

CSAM detection you need. Data privacy your users expect.

With Safer Enterprise’s self-hosted deployment, you control how the solution integrates into your infrastructure, giving you flexibility to choose how it feeds into your workflows while providing industry-leading CSAM detection.

CSAM classification and hash value generation occurs entirely within your infrastructure. Once generated, only hash values are sent via API to match against a database aggregating known CSAM hashes.
